# Cornices & Friezes

"The architrave, frieze, and cornice are ... a fifth of the column height, and as a whole they must be divided into twelve parts. The architrave is four parts, the frieze three, and the cornice five."

-- Andrea Palladio, *The Four Books of Architecture*,  
Book I, Chapter XVI, 1570

Originally used to hide the unfinished joints between walls and ceiling, plaster cornices evolved from plain coving to highly decorative or “enriched” pieces.

Our cornices are created in many levels of enrichment, themes and heights, and projections.

# Panels & Casings

"Mouldings are in Architecture what Letters are in Writing."

-- Ephraim Chambers, *Cyclopædia, An Universal Dictionary of Arts and Sciences*, p. 593, 1728

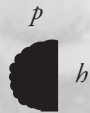

Whether they're presented as a straightforward profile or a mesmerizing enrichment, wall panels and casings do much more than break up blank space. They shift focus, play with light and shadow and define beginnings and completions.

# Medallions

"To clean the beauty of one's ceiling medallions, it is best to use a Tuscan bread with crust removed."

-- Anonymous

Ceilings can go unnoticed. Often because it possesses nothing to appreciate. Medallions raise the profile of any overhead space.

With a chandelier or luminaire highlighting a medallion's details, the ceiling joins the rest of your space's carefully planned design.

# Domes

"The Laconicum and other sweating baths must adjoin the tepid room, and their height to the bottom of the curved dome should be equal to their width. Let an aperture be left in the middle of the dome with a bronze disc hanging from it by chains. By raising and lowering it, the temperature of the sweating bath can be regulated."

-- Vitruvius, *The Ten Books of Architecture*, Chapter X

One of the most magnificent pieces available is the hemispherical dome.

Plaster domes can be installed within a ceiling to increase perceived height, provide reflective light or add unique acoustics.

# Columns

"In the case of diminution, one notices that the longer the columns are the less they diminish, as the height itself produces the effect of diminution from a distance..."

-- Vitruvius, *The Ten Books of Architecture*, Chapter XXIII, 1570

Columns and pilasters instantly give any area integrity and structure.

Each column or pilaster is completed with a capital and a base, which receive their design cues from the Tuscan, Ionic and Corinthian.

Columns and pilasters are often placed in higher traffic areas or within range of touching. In these cases, we use more durable types of plaster and reinforcing fibres. It takes greater skill, but the results are indisputable.

# Brackets & Modillions

"The greatest Art in the world was done for its place and in its place."

-- John Ruskin, 1819 - 1900

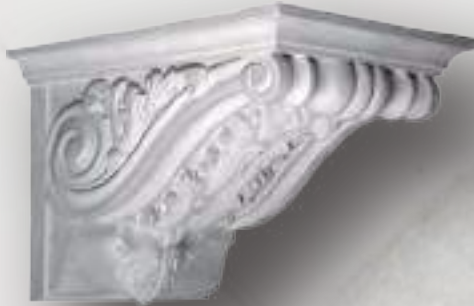

Plaster brackets serve multiple purposes, some traditional, some inventive.

Brackets are not load-bearing pieces. Instead, they disguise any framework that does support weight. Additionally, brackets can finish off pieces of existing trim.

Our brackets come in a bountiful array of sizes and styles to suit your application.

# Ceiling Systems

"The reason why lime makes a solid structure on being combined with water and sand seems to be this: that rocks, like all other bodies, are composed of the four elements."

-- Vitruvius, *The Ten Books of Architecture*, Chapter V

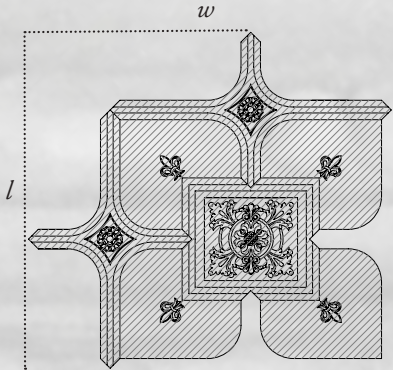

When stark expanses of unused flat space do not match your design goals, our ceiling systems are a definitive solution.

Our engineering department will develop a layout that accommodates lighting fixtures, HVAC and fire prevention systems or any other unique trait your ceiling might possess.

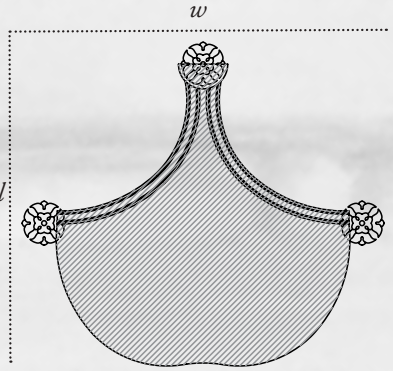

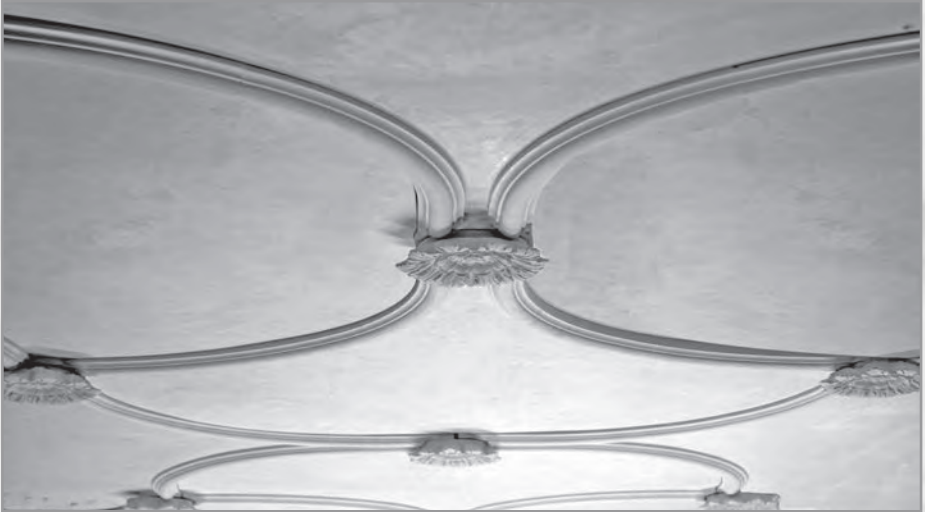

We will also provide our knowledge on framing and bracing requirements.
